

MEET
THE FIRST DEFILATIONARY TOKEN
ON THE HARMONY NETWORK

ONEMOON

There can only be
ONEMOON!

ONEMOON is the first deflationary token on the Harmony ONE Network.

Made by the developers of MochiSwap, **ONEMOON** is the first HRC20 token of its kind on the Harmony Network which is faster, cheaper, and easier to use than Binance Smart Chain (BSC) or Ethereum.

Released on 04/19/2021, **ONEMOON** has already shown it has tremendous growth potential.

ONEMOON is your chance to buy the first deflationary token on a leading top 100 Blockchain project. While similar BSC and ETH tokens compete for shelfspace, ONEMOON is in a class of its own; there are no other products like it.

WHAT IS ONEMOON?

ONEMOON is the first deflationary token on the Harmony ONE Network, built by the developers of MochiSwap.

The token features a transaction fee which adds to locked liquidity, distributes tokens to ONEMOON holders, and burns both ONEMOON as well as hMOCHI (the native token of the MochiSwap DEX, on Harmony Network).

WHAT ARE ONEMOON'S TOKENOMICS?

ONEMOON features a 10% transaction fee, which includes:

- ◆ 5% distributed to all ONEMOON holders
- ◆ 2.5% locked in Liquidity
- ◆ 1.25% used to burn ONEMOON
- ◆ 1.25% used to buy/burn hMOCHI, the native MochiSwap token

WHAT MAKES ONEMOON DIFFERENT?

ONEMOON is not only the first deflationary token on the Harmony Network, but it is also a *deflationary mechanism for the native MochiSwap DEX token*. As ONEMOON adoption increases, the hMOCHI supply tightens.

ONEMOON has a *first-mover advantage*, helping bring new users and crypto enthusiasts to the Harmony Network while *highlighting the speed, efficiency and cost-effective features of Harmony*.

ONEMOON

WHO IS THE ONEMOON TEAM?

The developers of ONEMOON have a **proven track record** of success with previous blockchain ventures, most notably their **cross-chain MochiSwap DEX** with both BSC and Harmony support and also with **running an elected node on the Harmony Network**.

WHAT DOES THE ROADMAP LOOK LIKE?

While **ONEMOON** is directly tied to the **MochiSwap DEX**, we can expect to see new MochiSwap functional features integrated which include **Single-Asset Staking, API and analytics dashboards, as well as fun features such as NFT's**.

The success of ONEMOON is parallel with the success of MochiSwap, as adoption of one will drive the adoption of the other.

WHAT DOES THE FUTURE LOOK LIKE FOR ONEMOON?

In the first week, we have seen a **number of improvements from community efforts** to help boost the overall experience of ONEMOON holders. These improvements include a **customized price chart, specifically for ONEMOON** (which can be seen at onemoon.watch), as well as a number of **guides and tutorial assets** which help **streamline the process** for **users who are new to Harmony and DeFi**.

In the future, we can expect to see a number of **technical improvements on the MochiSwap DEX that will aim to automate the process and make it airtight**, so that those with absolutely no experience in DeFi can have a simple time buying or selling ONEMOON on MochiSwap.

WHAT IS MOCHISWAP?

MochiSwap is the first cross-chain DEX on the Harmony ONE network, using the native token MOCHI which serves as both a governance and medium of exchange. MochiSwap's developers are active in the Harmony ONE community and operate one of the Elected Nodes on the Harmony Network.

WHAT IS HARMONY ONE?

Harmony ONE is an effective **Proof of Stake with Sharding, 2-second block time and cheap Gas fees** that make it one of the **cheapest and most efficient networks** for both **Developers and End-Users**.

[Ript.io created a March Madness NCAA tournament to allow users to build a bracket and compete with other players on-chain. In building this app, Ript executed over 1,000 smart contract executions and deployed over 100 contracts on the Harmony mainnet. Overall they spent ~7 ONE (\$1.25 at time of deployment) for the entire app.]

HOW CAN I VERIFY THAT LIQUIDITY IS LOCKED?

ONEMOON The developers of MochiSwap recently implemented a **3-party multisig wallet** (using Gnosis Safe) to control the MochiSwap community treasure. This is a step which has been taken in order to **help decentralize the MochiSwap ecosystem**, and one that will help MochiSwap function properly as a DAO.

"There was never any migrator code in the DEX and the LPs cannot be tampered with by anyone. This will be provable using explorer-based contract verification in the near future."

(source: <https://mochiswap.medium.com/introducing-multi-sig-on-mochiswap-bd5a7af5c278>)

WHAT IS A DEFLATIONARY TOKEN?

ONEMOON is deflationary, meaning **the max supply was minted at launch**.

As ONEMOON transactions occur, a 10% transaction fee instantly distributes tokens to all ONEMOON holders, while adding tokens to the locked liquidity, and also burning a portion of ONEMOON tokens. These features collectively drive down the circulating token supply, making ONEMOON deflationary in nature.

In short, the more that ONEMOON is used, the more scarce it will become.

HOW DOES THE TOKEN FUNCTION?

ONEMOON is an *HRC20 token built on the Harmony Network*. At the time of writing, ONEMOON holders can store their ONEMOON tokens in Metamask, as well as buy and sell ONEMOON using the *MochiSwap DEX* on the Harmony Network.

When ONEMOON holders buy, sell, send, or receive ONEMOON tokens a **10% transaction fee** will be subtracted from the transaction total.

For example: when User-A sends 1,000,000 ONEMOON tokens to User-B, a 10% fee will be provided by User-A's transaction and used to power the ONEMOON tokenomics (for more on Tokenomics see: "What are ONEMOON's Tokenomics?"). After the transaction fee, User B will then receive 900,000 ONEMOON tokens. *This transaction fee will be applied any time ONEMOON holders buy, sell, or send their ONEMOON tokens.*

HOW TO BUY ONEMOON WITH FIAT

1

Buy coins from an exchange

Buy your coins from Crypto.com, and then withdraw from Crypto.com to either **Binance.com**, **Kucoin.com**, or **Binance.us**. Once deposited in Binance, sell your coins for **ONE**.

(We suggest using Crypto.com as they do not have any delays to withdraw; once your payment clears you can withdraw immediately and XLM as its fast / cheap, but feel free to use a token you are comfortable with.)

Note: Kucoin requires new users to wait 24 hours before withdrawing funds; so if you do not have a Kucoin account already, Binance might be more ideal.

2

Download & set up Metamask to use the Harmony Network

Click **Settings > Networks > Add Network** then copy the settings here:

- ◆ **Network Name:** Harmony Mainnet
- ◆ **RPC URL:** <https://api.harmony.one/>
- ◆ **Chain ID:** 1666600000
- ◆ **Symbol:** ONE
- ◆ **Block Explorer URL:** <https://explorer.harmony.one/#/>

3

Copy your Metamask address & convert to Harmony One.

Go to <https://explorer.harmony.one> and copy/paste your '**0x**' address and search. The resulting address will be your Harmony Version and will start with '**one1**'.

Use this address to withdraw **ONE** from your exchange. Once your wallet is funded with **ONE** you are ready for the next step.

Swap your **ONE** tokens for **ONEMOON** on MochiSwap

4

In the Metamask, browser go to:

<https://one.mochiswap.io/#/swap>

Set your *slippage* to **12%**, then select '**ONE**' from the token dropdown menu - if you don't see it, you can search for it using the contract address:

0xCB35e4945c7F463c5CCBE3BF9f0389ab9321248F

5

Select how many '**ONEMOON**' you would like to purchase and click '**Approve**'.

Then '**Swap**' to initiate the exchange.

HOW TO BUY ONEMOON WITH CRYPTO

1

Swap coins for ONE

If you have BNB or ETH in Metamask, send it to [Binance.com](#), [Kucoin.com](#), or [Binance.us](#) trade it for **ONE**.

Note: Kucoin requires new users to wait 24 hours before withdrawing funds; so if you do not have a Kucoin account already, Binance might be more ideal.

2

Download & set up Metamask to use the Harmony Network

Click **Settings > Networks > Add Network** then copy the settings here:

- ◆ **Network Name:** Harmony Mainnet
- ◆ **RPC URL:** <https://api.harmony.one/>
- ◆ **Chain ID:** 1666600000
- ◆ **Symbol:** ONE
- ◆ **Block Explorer URL:** <https://explorer.harmony.one/#/>

3

Copy your Metamask address & convert to Harmony One.

Go to <https://explorer.harmony.one> and copy/paste your '**0x**' address and search. The resulting address will be your Harmony Version and will start with '**one1**'.

Use this address to withdraw **ONE** from your exchange. Once your wallet is funded with **ONE** you are ready for the next step.

Swap your ONE tokens for ONEMOON on MochiSwap

4

In the Metamask, browser go to:

<https://one.mochiswap.io/#/swap>

Set your **slippage to 12%**, then select '**ONE**' from the token dropdown menu - if you don't see it, you can search for it using the contract address:

5

Select how many '**ONEMOON**' you would like to purchase and click '**Approve**'.

Then '**Swap**' to initiate the exchange.

6

Add ONEMOON to your Metamask wallet

Open Metamask and click '**Add Token**' > '**Custom Token**' and paste the contract address:
0xCB35e4945c7F463c5CCBE3BF9f0389ab9321248F
